

INSTRUCTIONS FOR OPENING ProveyBlue® (methylene blue) Injection, USP, 0.5% AMPULES

ProveyBlue® (methylene blue) injection, USP, 0.5%, is filled into One Point Cut (OPC) ampules. OPC ampules are pre-scored and should open easily with little risk of splintering or sharp edges. A white dot on the top part of the ampule indicates the position of the score below it.

Gently tap the top of the ampule to remove all the liquid from the top.

Clean the top of the ampule with an alcohol pad.

With the alcohol pad still in your hand and the ampule in an upright position, place your thumb on the white dot and your index finger of the back of the ampule top. Push the ampule top away from the dot using gentle, even pressure.

The ampule should break cleanly.

Safety Considerations

- Do not try to open the ampule by force. If the ampule doesn't break open, either use an ampule opener or reposition in your hand and try again.
- Parenteral drug products should be inspected visually for particulate matter and discoloration prior to administration, whenever solution and container permit.
