

Instructions for Removing Tear-off Seal from Acetylcysteine Solution, USP Vials

Acetylcysteine Solution, USP

- All vials have tear-off seal
- Not approved for parenteral injection
- Vial closure is not made with natural rubber latex

1. While holding the Acetylcysteine Solution vial with the tab on the plastic cap facing you, lift the plastic cap up to tear the aluminum seal.

2. Grasping the vial in one hand and the plastic cap in the other hand, pull the cap away from the vial (and downward) to tear off and remove the aluminum seal.

3. Once the aluminum seal is fully removed, the rubber stopper will come off easily to access the medication. For multiple dose usage, keep the rubber stopper (do not discard) so the vial can be closed and stored if necessary, according to the directions in the Package Insert labeling.

4. Remove contents from the vial, and use as directed.
